SUMMARY

Final-year Computer Science student majoring in Artificial Intelligence at Adelaide University, graduating December 2026. I build full-stack web applications, REST APIs, and AI reasoning systems in Python, JavaScript, Java, and SQL. Outside of coursework I rebuilt a dormant university club into a 100-plus member organisation and Club of the Year, leading an eight-person committee through a cross-institutional merger. I am looking for a graduate role in software engineering, data, or technology consulting, and I can start soon.

EDUCATION

Bachelor of Computer Science (Artificial Intelligence), Adelaide University

Expected Dec 2026

GPA: 5.2 / 7.0 | 15% International Merit Scholarship

Relevant coursework: Artificial Intelligence, Machine Learning, Algorithm Design and Data Structures, Event-Driven Computing, Cloud and Concurrent Programming, Cybersecurity Fundamentals, Web and Database Computing, Software Engineering.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C++, SQL

Frameworks & Libraries: Vue.js, Node.js, Express.js, NumPy, pandas, matplotlib

Databases & Tools: MySQL, MongoDB, Git, GitHub, Docker, AWS (EC2, S3), VS Code, JUnit

Concepts: REST APIs, OAuth2, Object-Oriented Programming, Event-Driven Architecture, Data Structures and Algorithms, Agile / SDLC

PROJECTS

MetaPlay, Full-Stack Game Discovery Platform

Mar – Jun 2025

Node.js, Vue.js, MySQL, RAWG API, Google OAuth2

- Built 15-plus REST API endpoints serving personalised dashboards, user collections, reviews, and role-based content management.
- Added Google OAuth2 with stateful sessions and three-tier role-based access (admin, user, guest), so the app never stores raw passwords.
- Designed a normalised relational schema across eight tables with enforced referential integrity, and shipped it with no critical bugs at submission using Git branching and sprint reviews.

Wumpus World AI Agent, Autonomous Reasoning Agent

Mar – May 2026

Python, Propositional Logic, Search Algorithms

- Built an agent that navigates a partially observable environment using a propositional knowledge base and logical inference. It scored 10 out of 10 on the course autograder across hidden test environments.

GPS Tracker Dashboard, Reactive Programming Application

Mar – May 2026

Java, Sodium FRP, JUnit

- Built a real-time tracking dashboard with functional reactive programming, modelling location updates and alerts as composable event streams with no shared mutable state. Covered by 19 passing unit tests.

LEADERSHIP & EXPERIENCE

President, Adelaide University Tennis Club

Jul 2024 – Mar 2026

- Took over a dormant club with no active committee and led the merger of two clubs during the Adelaide and UniSA consolidation, with no disruption to members.
- Recruited and led an eight-member committee with clear roles across events, competitions, and communications.
- Won \$7,000-plus in facility upgrades through grant applications and negotiation with university sports administration.
- Grew membership to over 100, a 75% increase in participation. The club went on to win Club of the Year, the Jessop Shield, and a \$1,000 prize.

Tennis Coach, Tea Tree Gully Tennis Club

Mar 2024 – Present

- Run 10-plus coaching sessions a week for 40-plus junior and adult players, adapting how I teach to each player's level and keeping players coming back across multiple terms.

Retail Assistant, IGA (Elizabeth Downs, then Hutt Street)

Feb – Oct 2024

- Handled point-of-sale, stock replenishment, and customer service across two stores in a busy retail environment.
