PROFESSIONAL SUMMARY

Final-year Computer Science student (Artificial Intelligence major) at Adelaide University, with hands-on experience building full-stack applications, REST APIs, and AI reasoning systems in Python, JavaScript, Java, and SQL. Rebuilt a dormant university club into a 100+ member organisation and Club of the Year, leading an 8-person committee through a cross-institutional merger. Seeking a 2027 graduate role in software engineering, data, or technology consulting, bringing technical depth, structured problem-solving, and a proven record of delivering through complex, multi-stakeholder change.

EDUCATION

Bachelor of Computer Science (Artificial Intelligence), Adelaide University

Expected Dec 2026

GPA: 5.2 / 7.0 | 15% International Merit Scholarship

Relevant coursework: Artificial Intelligence, Machine Learning, Algorithm Design & Data Structures, Event-Driven Computing, Cloud & Concurrent Programming, Cybersecurity Fundamentals, Web & Database Computing, Software Engineering.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C++, SQL

Frameworks & Libraries: Vue.js, Node.js, Express.js, NumPy, pandas, matplotlib

Databases & Tools: MySQL, MongoDB, Git, GitHub, Docker, AWS (EC2, S3), VS Code, JUnit

Concepts: REST APIs, OAuth2, Object-Oriented Programming, Event-Driven Architecture, Data Structures & Algorithms, Agile / SDLC

PROJECTS

MetaPlay — Full-Stack Game Discovery Platform

Mar – Jun 2025

Node.js, Vue.js, MySQL, RAWG API, Google OAuth2 · 5-member team

- Designed and built 15+ REST API endpoints serving personalised dashboards, user collections, reviews, and role-based content management.
- Integrated Google OAuth2 with stateful session handling and 3-tier role-based access control (admin, user, guest), eliminating password storage entirely.
- Architected a normalised relational schema across 8+ tables with enforced referential integrity; delivered zero critical bugs at submission using Git branching and sprint reviews.

Wumpus World AI Agent — Autonomous Reasoning Agent

Mar – May 2026

Python, Propositional Logic, Search Algorithms

- Built an autonomous agent that navigates a partially-observable environment using a propositional knowledge base and inference-based reasoning; achieved 10/10 on the course autograder across hidden test environments.

GPS Tracker Dashboard — Reactive Programming Application

Mar – May 2026

Java, Sodium FRP, JUnit

- Built a real-time tracking dashboard using functional reactive programming, modelling location updates and alerts as composable event streams with no shared mutable state; 19 passing unit tests.

LEADERSHIP & EXPERIENCE

President — Adelaide University Tennis Club

Jul 2024 – Mar 2026

- Rebuilt a dormant club with no active committee and led the merger of two clubs during the Adelaide-UniSA institutional consolidation, with no operational disruption.
- Recruited and led an 8-member committee with defined governance structures across events, competitions, and communications.
- Secured \$7,000+ in facility upgrades through grant applications and negotiation with university sports administration.
- Grew membership to 100+ (a 75% increase in participation), culminating in Club of the Year recognition, the Jessop Shield, and a \$1,000 prize.

Tennis Coach — Tea Tree Gully Tennis Club

Mar 2024 – Present

- Deliver 10+ weekly coaching sessions to 40+ junior and adult players, adapting technical instruction to individual skill levels and retaining players across multiple terms.

Retail Assistant — IGA (Elizabeth Downs, then Hutt Street)

Feb – Oct 2024

- Managed POS operations, stock replenishment, and customer service across two store locations in a high-volume retail environment.
